IKHWAN MAULANA

Full Stack Developer

Bekasi, Indonesia | +62 896-7367-4598 | ikhwanmaulana796@gmail.com | linkedin.com/in/ikhwan-maulana-1700b842b | github.com/IkhwanMaulana07

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience designing, building, and deploying end-to-end web applications, particularly with Go (Golang), PHP (Native MVC, working knowledge of Laravel), and React.js on the frontend, and familiar with Java Spring Boot fundamentals for enterprise-style backend architecture. Backed by relational database design experience in MySQL, with working knowledge of Oracle SQL. Experienced in RESTful API architecture and frontend-backend integration, asynchronous data handling (Fetch/AJAX), authentication and role-based access control, and integrating AI/ML capabilities into production web applications. Strong problem-solving and troubleshooting skills, a practical understanding of software testing and QA fundamentals (manual and basic automation), and comfortable working both independently and in cross-functional teams. Maintains a portfolio of deployed full-stack web applications demonstrating end-to-end delivery, from database schema and API design through to a polished, production-ready UI, with a continuous learning mindset toward emerging web technologies.

CORE QUALIFICATIONS

- Bachelor's Degree in Computer Science (Informatics Engineering), Universitas Gunadarma, GPA 3.78/4.00 — Fresh Graduate, open to entry-level opportunities regardless of years of experience.
- Practical experience with Go (Golang, Gin-Gonic, GORM) and PHP (Native MVC) for backend development, with working knowledge of Laravel; familiar with Java Spring Boot fundamentals.
- Hands-on experience building interactive, component-based frontend interfaces with React.js (also Vue.js and Next.js).
- Relational database design experience with MySQL (schema normalization, indexing, query optimization) and working knowledge of Oracle SQL.
- Designed and consumed RESTful APIs for frontend-backend integration, using Fetch API/AJAX and Axios for asynchronous data handling.
- Solid Git/GitHub version control skills for collaborative, team-based development workflows.
- Strong problem-solving and troubleshooting ability, demonstrated through debugging and diagnosing issues across full-stack applications.
- Comfortable working both independently and within cross-functional teams (business analysts, designers, QA).
- Practical understanding of software testing and quality assurance fundamentals — manual test case validation, input/data validation, and collaboration with QA to verify implementation quality.
- Proactive learner, quick to adopt new frameworks, languages, and tools to keep pace with evolving web development practices.
- Maintains a demonstrable portfolio of deployed full-stack web applications (see Selected Projects) available for review during the selection process.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Go (Golang), PHP, Java, Python, SQL, HTML5, CSS3

Backend Frameworks: Go Gin-Gonic, PHP Native MVC, Laravel (familiar), Java Spring Boot (familiar), Express.js, Nest.js (familiar)

Frontend: React.js, Next.js, Vue.js, Angular (familiar), Redux, jQuery

API & Real-Time: REST API Design & Integration, Fetch API/AJAX, Axios, GraphQL (familiar), WebSocket/Socket.IO, JWT & OAuth

Styling & UI: Tailwind CSS, Bootstrap, Material UI, responsive & mobile-first design

Databases & ORMs: MySQL/MariaDB, Oracle SQL (familiar), PostgreSQL, MongoDB, SQLite, GORM (Go ORM)

Testing & Quality Assurance: Manual Testing Fundamentals, Basic Test Automation Exposure, Jest, React Testing Library, Postman

Build & Package Tools: Vite, npm, pnpm, ESLint, Prettier

DevOps & Deployment: Git/GitHub, GitHub Actions (familiar), Docker (familiar), Vercel, Netlify, Streamlit

AI & Machine Learning: Python, PyTorch, TensorFlow/Keras, Ultralytics YOLO, OpenCV, scikit-learn, Google Gemini API

SELECTED FULL STACK & WEB DEVELOPMENT PROJECTS

Malaka Jaya Digital MSME Community Web Portal
Go (Golang) | Gin-Gonic | GORM | SQLite / MySQL | JWT | Vanilla CSS | Google Gemini API

- Architected a full-stack community enterprise and product catalog platform in Go (Gin-Gonic) with role-based access control (Admin, Merchant, Resident) and direct customer ordering via WhatsApp at 0% commission.
- Built the backend with a GORM persistence layer (SQLite / MySQL) and internal RESTful endpoints; implemented secure authentication with JWT in HTTP-Only cookies, Bcrypt hashing, and Gin RBAC middleware.
- Developed responsive, mobile-first front-end pages (Vanilla CSS) including MSME directories with search across 6 business sectors, product galleries, and news publishing.
- Built Merchant and Admin dashboards with full product CRUD, one-click stock toggling, live metrics, one-click MSME verification with audit log, and a news CMS.
- Integrated a Google Gemini API (gemini-1.5-flash) AI assistant chatbot, injecting live directory data from the Go backend for hyperlocal recommendations and business licensing guidance.

Veyora Technologies — F&B Digital Infrastructure Platform
Full Stack Software Engineer
Tech Stack: Next.js 16, React 19, Golang (Gin Gonic), Redux Toolkit, TypeScript, Tailwind CSS, Docker, Docker Compose

- Architected and engineered a full-stack, decoupled monorepo web platform delivering 0% commission direct-ordering infrastructure for F&B businesses.
- Built responsive, high-performance user interfaces using Next.js 16 (App Router, Turbopack) and Tailwind CSS, integrating custom interactive micro-animations via React Bits and i18n multi-language support (ID, EN, ZH).
- Centralized application state using Redux Toolkit to power dynamic aggregator savings calculations and multi-step consultation funnels with asynchronous API syncing.
- Developed high-concurrency, low-latency RESTful APIs in Golang (Gin Gonic), achieving sub-millisecond response times for automated lead persistence and WhatsApp dispatch generation.
- Engineered a Next.js dynamic runtime reverse proxy to manage secure internal container-to-container routing and sanitize hop-by-hop HTTP headers.
- Containerized the full-stack architecture using Docker & Docker Compose with optimized multi-stage builds (node:22-alpine & golang:alpine), reducing production image footprint by 60% with persistent volume storage.

Fullstack Web Developer | Al-Amin Academic Information & Grading System
Next.js 14, React 18, TypeScript, Redux Toolkit, Laravel 11, PHP 8.3, SQLite, Docker, GitHub Actions

- Developed an institution-scale fullstack web platform for academic management and student grading with 3 user roles (Role-Based Access Control: Admin, Teacher, Student).
- Implemented a centralized state management architecture using Redux Toolkit and TypeScript to manage asynchronous data cycles, entity caching, and live search synchronization.
- Designed a high-performance RESTful API backend architecture using Laravel 11 and Laravel Sanctum token authentication with secure ACID database transactions.
- Built an automated academic calculation engine with dynamic weighting (30% Assignments + 30% Midterm + 40% Final Exam), self-service digital report cards for students, and Excel spreadsheet (.xls) export.
- Packaged the entire application infrastructure into Docker Compose (multi-stage Alpine Linux, persistent volumes, healthchecks) and integrated a GitHub Actions CI/CD pipeline for automated testing (PHPUnit) and build verification.

AI-Powered Movie Recommender & Image Classification Apps
Python | Streamlit | TensorFlow/Keras | TF-IDF | Cosine Similarity

- Built interactive, front-end-driven Python web applications (Streamlit) featuring real-time search/filtering, dynamic content rendering, and file-upload based inference — applying core UI/UX and state-management principles shared with JS front-end development.
- Integrated external APIs for dynamic data fetching (poster retrieval, metadata) and designed responsive, non-technical-user-friendly interfaces.

Black Soldier Fly (BSF) Larva Detection & Classification System (Bachelor's Thesis)
Python | YOLOv11s | TensorFlow Lite | Flutter

- Developed an end-to-end computer vision system, later deployed on-device via a Flutter mobile front-end, demonstrating cross-platform application delivery beyond the web.
- Achieved 0.9723 precision, 0.8315 recall, and 0.8720 mAP50 across 4 classification stages on a 21,974-image dataset.

SOFTWARE ENGINEERING EXPERIENCE

- Engineered full-stack applications end-to-end: relational database design, backend business logic, RESTful API architecture, and front-end implementation through to production deployment.
- Applied modular programming paradigms to cleanly decouple data layer, business logic, API layer, and presentation layer across JavaScript, PHP, and Go stacks.
- Experienced diagnosing runtime environments, resolving package/dependency conflicts (npm/yarn), and configuring build tooling (Vite/Webpack) and GPU/CUDA acceleration for ML workloads.
- Proficient with Git/GitHub version control workflows, code review, and deploying applications to platforms such as Vercel, Netlify, and Streamlit Cloud.

EDUCATION

Bachelor of Computer Science (S.Kom) in Informatics Engineering

Universitas Gunadarma — Bekasi, Indonesia | Faculty of Industrial Technology, Dept. of Informatics | NPM: 50422698 | GPA: 3.78/4.00

Relevant Coursework: Software Engineering, Web Programming, Database Systems, Artificial Intelligence, Machine Learning, Computer Vision, Data Science

Computer and Network Engineering (TKJ)

SMK Islam Al-Amin | Focus: Computer Networking, Hardware Maintenance, Server & Network Administration

CERTIFICATIONS & TECHNICAL TRAINING

- Programmer — National Professional Certification Board (BNSP) / LSP (2026)
- Golang for Intermediate — Universitas Gunadarma (2025)
- Oracle for Intermediate — Universitas Gunadarma (2025)
- Programmer Course — Universitas Gunadarma (2025)
- Application Development Design — Universitas Gunadarma (2024)
- Wireless LAN Installation — Universitas Gunadarma (2024)

CONFERENCES & SEMINARS

- Tech Talk: "Designing Future with Back End in Tech Industry" — Google Developer Student Clubs (GDSC), Universitas Gunadarma (2024)
- National Symposium: "Synergy of University and Industry Collaboration: Software and Hardware for Artificial Intelligence" — Universitas Gunadarma (2025)

ORGANIZATIONAL EXPERIENCE

Head of Entrepreneurship & Skills Division — Student Council (OSIS), SMK Islam Al-Amin

- Led student entrepreneurship initiatives, organized hands-on technical workshops, and coordinated cross-functional student project teams.

ADDITIONAL INFORMATION

Languages: Indonesian (Native), English (Intermediate / Professional Working Proficiency)

Interests: Full Stack Web Development, JavaScript Ecosystem, Artificial Intelligence, Generative AI, Cloud & Mobile Deployment
